Can you help me to look for and talk about triangles?

Grown-ups:

Can you help your child look for triangles. Everywhere you go can you help them to spot a triangle. You could talk about the properties of a triangle; that it has 3 sides which can be the same or different lengths. If your child is interested you could introduce other words related to a triangle such as 'vertices' (another name for angle) or 'right angle' (which is a 90° angle), equilateral (all 3 sides and 3 angles are the same) You could post your child's interest in squares on their tapestry account.
